Introduction

The purpose of this document is to provide clear and comprehensive guidance for the development of the KCPerformance webshop in Shopify. This document outlines the expectations, functional requirements, and structural details that need to be followed to create a fully operational webshop that meets the company's needs.

As a developer at the company, I have a clear vision of how the webshop should function, but due to my limited experience with Shopify, I am relying on experienced Shopify developers for the implementation. This document is intended to ensure that the development process is aligned with my vision and that the final product delivers a flawless user experience.

Key goals of this project include:

- Creating a seamless and efficient shopping experience for customers.
- Ensuring robust data structure for products and categories to support future scalability.
- Building out Shopify-specific components with proper functionality (filters, cart, checkout, etc.).
- Incorporating a well-optimized and responsive design, adhering to the provided specification.

The scope of the developer's work is focused on creating a Shopify-based webshop that functions exactly as specified. All design and styling elements have been provided, so the primary focus is the structure, component functionality, and ensuring Shopify's platform capabilities are fully utilized to meet our requirements.

Webshop Explanation and Objectives

The KCPerformance webshop is envisioned as a dynamic online retail platform dedicated to automotive enthusiasts and customers seeking high-performance car parts and accessories. The webshop will serve as a central hub for our products, allowing users to easily navigate, explore, and purchase items that enhance vehicle performance and styling.

Purpose of the Webshop

The primary purpose of the KCPerformance webshop is to achieve the following objectives:

1. Showcase Products Effectively:

The webshop should feature a comprehensive catalog of automotive parts, each presented with high-quality images, detailed description, technical specifications, and pricing information. This allows potential customers to make informed decisions based on their specific needs and preferences.

2. Facilitate Seamless Sales Transactions:

The webshop should provide an intuitive and efficient shopping experience that encourages customers to complete their purchases. By simplifying navigation and reducing the number of steps in the checkout process, we aim to minimize cart abandonment and increase conversion rates.

3. Enhance Customers Engagement:

The webshop should include features that foster customer interaction, such as user-generated products reviews, Q&A sections, and the ability to save favourite products. These features will create a sense of community and trust, encouraging repeat visits and purchases.

4. Optimize Performance and Load Times:

A critical aspect of the web shop's functionality is its performance. The webshop should be built to ensure fast load times and a smooth browsing experience across all devices. This is essential for retaining user and improving search engine rankings.

5. Drive Traffic through SEO:

To reach our target audience effectively, the webshop should incorporate SEO best practices. This includes optimizing product pages with relevant keywords, utilizing meta tags, and ensuring a logical URL structure. The goal is to attract organic traffic and improve visibility in search engine results.

Important Functionality

The KCPerformance webshop will incorporate several key functionalities to meet the outlined objectives:

1. Product Catalog:

- The webshop should feature a well-organized product catalog categorized by types (e.g., exhaust systems, suspension parts, accessories).
- Each product should have its own dedicated page displaying high-resolution images from multiple angles, detailed descriptions, pricing, and availability status.

2. Advanced Search and Filter Options:

- The webshop should include a powerful search bar that allows user to search for products by keywords, part numbers, categories or descriptions).
- Filtering options should enable customers to narrow down product listings based on criteria such as brand, price range, vehicle compatibility, and customer ratings. This ensures that users can quickly find exactly what they need.

3. User Account Management:

- Customers should have the option to create personal accounts, allowing them to save their preferences, track order history, and manage shipping and payment information.

- The account section should also include a Wishlist feature, enabling users to save items for future purchases.
- 4. Shopping Cart and Checkout Process:**
- The shopping cart should display all selected items, with option to update quantities or remove items easily.
 - The checkout process should be streamlined, guiding users through a series of simple steps to complete their purchase. Multiple payment options (credit card, PayPal, IDEAL, etc.) and shipping methods will be offered to cater to diverse customer preferences.
- 5. Responsive Design:**
- The webshop should be designed to adapt seamlessly to various screen sizes, ensuring an optimal user experience on desktops, tablets, and mobile devices.
 - All elements, from navigation menus to product images, should be scaled appropriately to enhance usability and accessibility.
- 6. SEO Optimization:**
- All product pages should include SEO-friendly URLs, relevant meta descriptions, and optimized image alt texts to improve search engine visibility.
 - The content should be crafted with strategic keywords to attract organic traffic from search engines.

Design Reference

The Figma file serves as a design reference for the KCPerformance webshop, providing a clear idea of the layout, style, and interface elements. While it offers guidance for sizes, colours, and general structure, it is not intended to be followed with absolute precision.

Developers are encouraged to use the Figma file as a foundation but apply their own judgment where needed to ensure usability and functionality. This flexibility allows for improvements and adaptations during development while maintaining the overall design vision.

Screenshot of how the Figma file should look like

Data Structure

The data structure outlined here provides a comprehensive model for how the information in the KCPerformance webshop should be organized. While I may not be familiar with every detail of how Shopify handles data internally, I've provided a structured approach that reflects how the data should logically connect and interact.

To further guide the development, I've included JSON files in the **Object_Data_Structure** folder that detail the structure of key entities like products, users, and orders.

These JSON files act as a blueprint to help you understand the expected attributes and data relationships. While Shopify might require adjustments or customization, this model serves as a clear reference point for the necessary components.

Important Note on Data Structure

- **JSON Reference Files:** Located in the **Object_Data_Structure** folder, these JSON files outlined the attributes and expected data for the entities like **Product, User, Order**, and more. These are structured as objects and can be adjusted as needed to align with Shopify's framework.
- **Flexibility for Shopify:** Although the data model presented here is ideal from my perspective, I understand that Shopify may have its own constraints. The core idea is to maintain data integrity and ensure a seamless user experience while adopting as needed.

Product Data

This object contains all the attributes related to a product, such as name, price, description, images, and vehicle compatibility. It ensures users have all the necessary details to make informed purchasing decisions.

Reference: `/objects_data_structure/Product.json`

***Note:** Descriptions: The `description_text` field uses Markdown formatting to provide rich product descriptions, making it easier to highlight product features and benefits. This allows for better flexibility in how product details are displayed to the user.*

User Data

This object stores user-specific information, such as contact details, shipping addresses, and order history. It allows the webshop to provide a personalized experience, enhancing user satisfaction and convenience.

Reference: `/objects_data_structure/User.json`

Order Data

This object captures the details of each transaction, ensuring accurate order processing.

Reference: `/objects_data_structure/Order.Json`

Car Filter Data

This data structure manages the relationships between products and compatible vehicles. It allows for a streamlined way to search for products that fit to the customer's car.

Reference: `/objects_data_structure/CompatibleCars.json`

Inventory Data

Monitors product stock levels, for notifying customers about limited product inventory and checking the remaining stock levels.

Reference: `/objects_data_structure/Inventory.json`

Categories Data

This is the data structure for the categories and subcategories, it is built up as an hierarchy.

Reference: `/objects_data_structure/Categories.json`

Note: To find products under the parent category "Onderstel" (id: 1), include all subcategory IDs, following the hierarchical structure. For example, for the parent category with ID 101 (first level), its subcategories will be identified by appending further levels, like 10101, 10102, and so on. Additionally, sub-subcategories will be represented as 1010101, 1010102, etc.

If a product is linked only to a subcategory ID such as 10101 (Camber Kits), it should still appear in searches for the parent category "Onderstel" (ID: 1), because it matches the subcategory IDs under the parent, following this structure. Therefore, products linked to any level under "Onderstel" should be included in the search by matching their IDs, whether at the first, second, or third hierarchical level.

Important Functionalities

In this section, I will detail the primary functionalities integral to the KCPerformance webshop. Each functionality is carefully designed to improve the user experience, streamline navigation, and facilitate ease of product discovery. By going more in depth, I aim to explain the purpose, design logic, and user interactions for features such as the search bar, category navigation, car filter, and detailed product description. These functionalities are pivotal in achieving a user-friendly, efficient, and engaging online shopping experience.

Search Bar

The search bar is meant to maximize product discoverability and efficiency. Key features include dynamic result display, error correction, and category searching.

- **Real-Time Results:** As users' type, the search bar should display a pop-up with the top five relevant results. This provides immediate feedback, allowing users to quickly scan and select a product without having to fully enter their search term or navigation away from their current page. Each suggestion shows details like product name, price, and a small image to help users identify the right product briefly.
- **Spelling Correction:** If a user makes a typo or spelling mistake, the search bar should detect it and suggest a corrected term, for example if a user searches for "Trbo Timre" the search bar should detect it and give feedback such as "No results for Tbro Timre, did you mean Turbo Timer?". This helps users find what they're looking for, even if they mistype or aren't sure of the exact spelling. The correction prompt is displayed at the top of the results list, guiding users to intended search results
- **Fallback Suggestion:** When there are no direct matches due to a typo or less common search term, the search bar will still provide valuable suggestions. In this case, users will see three popular products and a few commonly searched categories. This fallback ensures users are presented with relevant items, increasing engagement and helping them navigate toward popular options even without an exact match.
- **Category Search:** Users can search directly by category name (e.g., "Exhaust" or "Suspension"), and the search bar will show items within that category. This allows users who may not know a specific product name but know the category to browse relevant results more effectively. Category specific searches make it easy to narrow down product options based on a particular are of interest.

Category Navigation

The category navigation is designed to provide users with an intuitive and seamless way to browse the web shop's offerings. By organizing products into clear, hierarchical categories, this functionality ensures that users can quickly find what they're looking for, even if they don't use the search bar.

- **Expandable Categories:** The navigation menu features a primary list of main categories displayed prominently at the top of the site. When users hover over or click a category, a dropdown expands to reveal subcategories. This hierarchical structure allows users to drill down to specific products groups without overwhelming them with too many options at once.
- **Sticky Navigation:** The navigation bar remains visible as users scroll through the site (like on the KCPerformance website), always providing quick access to categories. This ensures that users can easily switch focus or explore additional products without needing to navigate back to the homepage or scroll back up.
- **Highlighted categories:** Popular categories are marked with subtle visual cues (bold text) to draw attention to the categories, and subcategories. This helps organise the dropdown.
- **Mobile-Friendly Design:** On mobile devices, the category navigation transforms into mobile menu so that users can easily access the categories via a phone. The menu will have a bar with popular categories and a hamburger button to open the menu.

Car Filter

The car filter functionality is a specialized tool designed to help users find products tailored to their specific vehicle. It simplifies the browsing experience by narrowing down the web shop's extensive catalog to only show compatible items, ensuring highly personalized and efficient shopping process.

- **Vehicle Selection Process:** The car filter allows users to select their vehicle by key attributes, such as **make**, **model**, **year**, and **engine type**. These options are presented in a step-by-step dropdown selection format, ensuring clarity and ease of use. Once the user completes the selection, the filter applies automatically, showing only the products compatible with chosen vehicle.
- **Compatibility Indicators:** Products displayed after applying the filter will include a label or badge (e.g., “Fits your car”) to assure users of compatibility. This feature reduces uncertainty and boosts customer confidence during the shopping process.
- **Filter Reset and Adjustment:** Users can easily reset the filter or modify their selection without starting over. Via the section in the side bar.
- **Flexible Filtering Options:** While the full filter process allows users to select details such as **make**, **model year**, and **engine type**, the car filter also supports partial filtering. Users can select just one criterion (e.g., **Brand**) to explore all products from that brand, or filter by **engine type** to see all compatible products for a specific engine across multiple vehicles. This flexibility allows users to conduct broader searches while still benefiting from filtering functionality, catering to both general and highly specific shopping needs.

In-Depth Product Description

The product description section is designed to provide with all the information they need to make informed purchasing decisions. This functionality combines detailed product specifications, visuals, and additional resources to create a comprehensive view of each item.

Waarom de Garrett GT28RS?

De Garrett GT28RS is een sportieve turbocharger die aanzienlijke vermogenswinst biedt zonder de rijervaring te verliezen. Het is een veelzijdige keuze die geschikt is voor verschillende toepassingen, van dagelijks rijden tot circuitraces.

Voordelen van de Garrett GT28RS

Krachtige Vermogenswinsten:
Verhoog het motorvermogen tot 350+ pk, afhankelijk van tuning.

Snelle Boortrespons:
Perfect voor snelle acceleratie en constante prestaties.

Betrouwbaarheid:
Gebouwd met de beste kwaliteit en duurzaamheid voor Garrett om bekend staat.

Breed inzetbaar:
Geschikt voor verschillende voertuigen en toepassingen.

Duurzaam Ontwerp:
Vervaardigd uit hoogwaardige, hittebestendige materialen voor een lange levensduur.

Specificaties

Eigenschap	Waarde
Maximaal vermogen	tot 350 pk (afhankelijk van tuning)
Compressor inlet	432 mm
Compressor outlet	467 mm
Turbine inlet	133 mm
Turbine outlet	47 mm
Axiale doorvoer	2,9 inch
Compressor toerental	85.000
Turbine toerental	100.000
Maximale snelheid	100.000 - 120.000 RPM

Compatibiliteit en installatie

Geschikte automodelen:
De Garrett GT28RS is compatibel met een breed scala aan voertuigen met motoren tussen de 1.6L en 2.5L. [Klik hier voor een volledige lijst met compatibele modellen.](#)

Model	Type	Jaar / Model	Motor type
Honda	2400i (E30/E31)	1990-1998	2.4L H24A2E inline-4
Honda	WB1.6/1.8	1990-1998 (NA)	1.6L/1.8L inline-4
Sabaru	WRX	2002-2005 (USA)	2.5L EJ255 Turbocharged inline-4
Sabaru	WRX	2002-2005 (EU)	2.5L EJ257 Turbocharged inline-4 (STI variant)

Installatie informatie:
De GT28RS turbo wordt geïnstalleerd op het uitlaatpijpstuk van de motor. Dit proces vereist meestal een aangepast turbo-uitlaatpijpstuk en een bijpassende buisgreep om de uitlaatgassen efficiënt af te voeren. Ook moet de intercooler worden geïnstalleerd om de luchttemperatuur te koelen, wat essentieel is voor het optimaliseren van de prestaties van de turbo.

Daarnaast moet de motorbesturing (ECU) worden aangepast om te zorgen dat de motor de juiste brandstof-luchtverhouding behoudt. Dit is cruciaal voor een veilige en efficiënte werking van de turbo. Voor de installatie worden vaak ook maat gesneden ledingen en fittingen gebruikt, en het is aanbevolen om de installatie door een professional te laten uitvoeren om te garanderen dat alles goed is afgestemd.

Installatie gids / Meer lezen:
Voor uitgebreide informatie over de installatie en verdere technische details, kun je de volgende bronnen raadplegen:
1. Installatiehandleiding voor Garrett GT28RS Turbocharger: <https://www.garrettmotion.com/>
2. Meer lezen over turbochargers en hun werking: <https://blog.kapformotors.nl/articles-over-de-turbo-charger/>

Waarom installeren?
Het installeren van de Garrett GT28RS turbocharger geeft je auto een aanzienlijke vermogenswinst en zorgt voor een veel betere acceleratie. De turbo verhoogt de hoeveelheid lucht die de motor beschikt, wat resulteert in meer brandstofverbranding en dus meer kracht. Dit maakt het een uitstekende keuze voor rijders die hun prestaties willen maximaliseren zonder concessies te doen aan betrouwbaarheid. Dankzij het compacte ontwerp van de GT28RS blijft de turbo responsief, waardoor hij ideaal is voor dagelijks gebruik en voor

- **Comprehensive Specifications:** Each product page includes a detailed table of specifications, highlighting key attributes such as dimensions, compatibility, materials, performance metrics, and warranty information. These details ensure that users can easily access whether a product meets their requirements.
- **Markdown for Rich Formatting:** The primary part of the product description will be written in **.MD format**. This allows for easy formatting of headings, bullet points, and emphasized text, ensuring a visually clean and engaging layout on the webshop. Markdown makes it simple to include:
 - Bold and italic text to highlight key details, bullet points or numbered lists for readability,
 - Headings to structure the content clearly, images and videos and hyperlinks to connect users to additional resources such as guides or related products.
- **Content:** The description are supports dynamic content, such as expandable sections for additional details. For instance: About the product, advantages of the product, specifications, compatibility, installation and guides.

Styling and Design

For the KCPerformance webshop, a consistent, polished look and feel are crucial for creating a professional and use-friendly experience. This section outlines the design principles and styling requirements for the webshop. To ensure a cohesive design, freelancers should follow the provided style guide closely and refer to the Figma design as a visual reference.

Brand Style Guide

A basic style guide for KCPerformance is provided with this document. This guide includes the essential brand and styling elements, such as:

- **Colour Scheme:** The primary, secondary, and accent colours that define the KCPerformance brand. These colours should be used consistently across the webshop to create a recognizable brand experience.
- **Typography:** The preferred fonts, sizes, and weights that capture the KCPerformance tone. Make sure to apply these to all text elements, from heading to product description, to reinforce brand identity.
- **Logo's:** Use the KCPerformance logo as provided, ensuring they are displayed correctly with adequate spacing to maintain visual impact.

While the style guide is not exhaustive, these core elements should guide the overall look and feel. For any styling decisions not explicitly covered in the guide, please aim for consistency with the KCPerformance brand style: modern, streamlined and performance oriented.

Figma Design for Layout Reference

A Figma design is available as a reference for the general layout of the webshop. This design offers an overview of how the homepage and major sections should be structured, including key blocks (e.g., product categories, banners, call-to-action areas). Please use this layout as a foundation, but note that minor adjustments may be required based on Shopify's constraints

***Note:** The Figma design is for reference only; it may not reflect every final detail, but it illustrates the intended flow and general structure.*

Block-Based Layout and Consistency

The layout of the KCPerformance webshop is structured using a **block-based approach**. Each section of the webshop, such as banners, product displays, and call-to-action areas, is treated as an individual block. This modular structure is designed to make each block flexible and independently movable, allowing adjustments to the layout without significant rework.

- **Flexible Block Placement:** The blocks should be designed so they can be repositioned easily. If, after the webshop goes live, a different order of block is desired, blocks can be moved up or down to accommodate layout changes. This flexibility is key to keeping the design adaptable and responsive to evolving preferences.
- **Visual Hierarchy and Flow:** While initial block placement should follow the Figma layout, the modularity of the blocks allows for quick adjustments. This structure also makes it easier to test different arrangements to optimize user experience.

***Important:** Each block should be built with the expectation that it may be rearranged. Avoid dependencies between blocks that could restrict this flexibility. All content and design elements within each block should function independently.*

This approach to a block/component -based layout provides a flexible, modular structure that can easily be adjusted as needed. It allows the webshop to adapt to future changes in content or layout preferences without needing a full redesign.

Component Explanation

This section provides a detailed breakdown of each key element within the KCPerformance webshop design. The aim is to ensure that every component is built to precise specifications, with a shared understanding of its functionality, design, and dynamic requirements. By following this guide, developers can accurately implement each element in a way that aligns with the design vision and user experience goals.

Each component includes:

1. **Visual Reference:** An image of the component, labelled with numbered sections that correspond to specific parts. Each numbered section provides a visual guide, making it easier for developers to identify and understand each element of the component. The image serves as a reference for how the component should look and function, with the numbers linking directly to detailed explanations of each section.
2. **Detailed Description:** A comprehensive explanation of what each component is and the intended functionality it should provide. This includes the component's role in the user experience and how it should behave under different conditions.

Note on Mobile Design

For mobile-specific designs, reference the **Figma file** to ensure all elements, including the banner and filter functionality, are optimized for smaller screens.

By following these explanations, developers will have a clear understanding of the requirements for each component, helping them create a fully functional and user-friendly webshop that meets the KCPerformance standards.

Header

This header is designed to facilitate easy navigation across the KCPerformance webshop. It consists of three key sections:

a. Header info

This bar provides essential information, such as the company's phone number, email address, and location. Each link in this section is interactive:

1. Phone number should trigger a direct call, and email should open email using href with mailto and tel. The location should link to the KCPerformance location in google maps.

b. Header main

This central part of the header contains the brand logo, search bar, and quick-access icons for shopping actions.

1. **Logo:** The KCPerformance logo should be high-quality and link to the homepage when clicked.
2. **Search Bar:** [The search functionality](#) is a crucial component, the search bar should offer advanced capabilities, allowing users to search for Products, Categories, and Car Brands. Provide suggestions for misspellings and always display products and popular categories.

Niks gevonden voor "trbo timer", bedoelt u "Turbo Timer"?

	Producttitel Information information information	€ 186,00
	Producttitel Information information information	€ 186,00
	Producttitel Information information information	€ 186,00

Andere populaire zoekopdrachten en categorieën

Turbo kits voor porshee	Engine parts
Civic Knaalpijp	Pistons
Saab interieur onderdelen	Turbo kits

3. **Shopping Cart and Account/Login Icons:** Icons for the shopping cart and user account should be easily accessible. The cart icon should display a notification counter reflecting the number of items added, consistent with the KCPerformance brand style.

c. Header nav

This section provides streamlined access to all main categories, with hover-over functionality:

1. **Category links:** Each category link leads to a dedicated category page.
Hover Functionality: When hovering, a dropdown displays subcategories, allowing further navigation into the subcategories and their subcategories.

--	---	---	--	--	---

Hero banner

This is the hero section

a. Banner and filter section

1. This is the [car filter function](#), this section allows users to filter products based on their car specifications through the following steps:
Brand: Select the car manufacturer, such as Audi, BMW, or Honda.
Type: Choose the car type, e.g., for Honda, options like "Civic" will appear.
Year/Model: Specify the car's production year and model. For example, a Honda Civic from 1996-2000 might be listed as "EJ/EK."
Engine Type: Pick from all available engine types for the selected model.
2. A visually engaging banner is included in this section, which cycles through different visuals or messages at regular intervals to keep the content fresh and engaging.

Products Cards

This block is a straightforward yet flexible component for displaying product in various contexts. It should support multiple variations, such as showcasing popular products, items on sale, or new arrivals. Additionally, each variation should include a small link (e.g., “View All Sales” or “View All New Products”) to guide users to related product collections.

a. Products showcase

1. **Section Title:** Clearly indicates the type of products being displayed (e.g., “Popular Products” or “New Arrivals”).
2. **Product Image:** A high-quality, detailed image that visually represents the product.
3. **Product Information:** Includes essential details such as the product title, a concise description, and the price.

Products Cards Carousel

This block functions similarly to the Product Cards block but includes interactive navigation. This component allows users to slide through the products by clicking on navigation buttons. It should maintain the same layout and variations as the Product Cards block, with the added functionality of a carousel for easy browsing.

Brands

The Brands section is designed to showcase two car brands that the company frequently works with. While it primarily serves as filler content, it also offers users the option to click on a brand to explore related products. This section should be flexible, allowing easy updates to feature different brands.

a. Brands

1. **Brand Image:** A high-quality image of a car associated with the brand.
2. **Brand Name:** The name of the car brand prominently displayed.
3. **Clickable Link:** An additional link that redirects users to the product listing of that specific brand.

Popular Categories

This section is similar in design and functionality to the Brands Block but is tailored to showcase popular product categories. Each category card provides users with a visual and interactive way to explore specific categories of interest.

1. **Category Image:** A high-quality image representing the products within the category.
2. **Category Title:** A clear and concise title for the category.
3. **Clickable Button:** An additional button or link for quick navigation to the full list of products in that category

About Us

The About Us block provides a concise overview of KCPerformance. It serves as a filler section, offering a brief introduction to the company while encouraging users to learn more.

Over KC Performance

Bij KCPerformance draait alles om passie voor auto's. Sinds onze start in 2008 hebben we ons gespecialiseerd in het finetunen en optimaliseren van voertuigen voor de ultieme rijervaring. Ons team van experts combineert vakmanschap met de nieuwste technologieën om elke auto naar een hoger niveau te tillen. Of je nu op zoek bent naar meer vermogen, betere handling, of unieke aanpassingen, wij staan klaar om jouw auto de aandacht te geven die het verdient. Welkom bij KCPerformance, waar we jouw autowensen tot leven brengen.

Information Header

The Information Header is a dynamic component displayed at the top of product, category, and brand pages. It provides users with contextual information based on their selection. For instance, if a user navigates to the "Engine" category, the header will feature an image, title, and description relevant to that category.

1. **Corresponding Image:** Visually appealing image that represents the selected category or brand.
2. **Category/Brand Title:** Clear title to identify the category or brand being viewed.
3. **Short Description:** Brief description providing additional context about the category or brand.

Bread crumb area

The Breadcrumb Area is an essential navigation aid included on every page. It displays the user's path to the current page, helping them understand their location within the website and enabling quick navigation back to previous pages.

Home / Engine

1. **Clear Path Display:** Shows the hierarchical path to the current page (e.g., *Home > Categories > Engine*).
2. **Clickable Links:** Each segment of the breadcrumb is clickable, allowing users to return to any previous step with ease.
3. **Responsive Design:** The breadcrumb should adapt seamlessly to different screen sizes for consistent usability.

Search results

The Search Results page is designed to display relevant products based on user queries, with a sidebar containing sorting and filtering options for refined searching.

a. Product Result Section

This section presents the search results in a grid format with user-friendly navigation options:

1. Page Selection

easy for navigation pages, show only 4 numbers in between arrows so that there wont be a long row of numbers.

2. Number of Results

with this selection the user can select how many results there are per page, make these bigger numbers like 20-40-60.

3. Product card

This is just a simple product card with a good quality image, product title, small description and pricing

b. Filters and Sorts

This sidebar provides tools for refining search results:

1. Car filter function

This is the car filter function, there is also an option to turn on to see universal products.

2. Sorts

These are just simple sorts.

3. Filters

This is where all the filters should be

SEO Section on Results Page

The SEO Section is a dedicated area placed at the bottom of every results page. Its purpose is to enhance search engine optimization by providing relevant, keyword-rich text specific to the page content. This section should be implemented for all categories, brands, and other data sets.

Porsche Tuning: Ontgrendel de Ultieme Prestaties en Stijl

Porsche Tuning: Verbeter de Kracht en Esthetiek van je Ikonische Auto

Porsche is een van de meest prestigieuze automerken ter wereld, bekend om zijn uitzonderlijke prestaties en luxueuze afwerking. Voor auto liefhebbers die het meeste uit hun Porsche willen halen, biedt tuning een uitstekende manier om de al indrukwekkende specificaties van deze voertuigen verder te verbeteren. Of je nu een Porsche 911, Porsche Cayenne, of een ander model hebt, tuning kan helpen om de prestaties, handling en esthetiek van je auto te optimaliseren.

Waarom je Porsche Tunen?

- Maximaliseer Prestaties:** Porsche staat bekend om zijn krachtige motoren, maar tuning kan je auto naar een hoger niveau tillen. Met motorupgrades zoals ECU-tuning, verbeterde luchtinlaties en performance uitlaatsystemen kun je de acceleratie, toerenheid en algemene kracht van je Porsche verbeteren. Dit maakt je rijtje spannender en biedt een dagelijkse rijervaring.
- Verbeter Handling en Stuurgedrag:** Voor een Porsche is uitstekende handling cruciaal. Met upgrades zoals sportvering, verlaagde schroeven en high-performance remsystemen kun je de stuurspons en grip van je auto verbeteren. Dit resulteert in een meer gecontroleerde en dynamische rijervaring, zowel op de snelweg als op het circuit.
- Personaliseer het Uiterlijk:** Porsche-tuning is niet alleen gericht op prestaties; je kunt ook de esthetiek van je auto aanpassen. Van aerodynamische bodykits en sportieve velgen tot aangepaste werklamp en interieuraccessoires, je kunt je Porsche een unieke uitstraling geven die bij jouw persoonlijke stijl past.
- Verhoog Comfort en Functionaliteit:** Tuning gaat niet alleen over snelheid en stijl. Met upgrades zoals luxe interieuraccessoires, geavanceerde infotainmentsystemen en ergonomische stoelen kan je het comfort en de functionaliteit van je Porsche verbeteren, wat elke rit aangenamer maakt.

Populaire Porsche Tuning Onderdeeltcategorieën

- Motorupgrades:** Verhoog het vermogen en koppel van je Porsche met hoogwaardige motorupgrades, waaronder chip-tuning, high-performance luchtinlaten en krachtige uitlaatsystemen.
- Veringsystemen:** Verbeter de handling van je Porsche met sportieve veringsystemen, waaronder verlaagde vering en verstelbare schokdempers voor een optimale rijervaring.
- Velgen en Banden:** Geef je Porsche een sportieve uitstraling met premium velgen en banden die de prestaties en esthetiek van je voertuig verbeteren.
- Interieuraccessoires:** Personaliseer het interieur van je Porsche met hoogwaardige materialen, luxe bekleding en geavanceerde technologieën voor een premium rijervaring.

Waarom Kiezen voor KC Performance?

Bij KC Performance bieden we een uitgebreid assortiment Porsche-tuningproducten die zijn geselecteerd op basis van kwaliteit en prestaties. Ons deskundige team staat klaar om je te helpen bij het kiezen van de beste categorieën en upgrades die passen bij jouw wensen en behoeften. Wij begrijpen de passie voor Porsche en zetten ons in om jouw auto te transformeren tot een ongeëvenaard voertuig op het gebied van zowel prestaties als stijl.

Conclusie

Porsche-tuning biedt talloze mogelijkheden om de prestaties, handling en esthetiek van je auto te verbeteren. Of je nu een liefhebber bent van pure snelheid of gewoon je Porsche een unieke uitstraling wilt geven, bij KC Performance vind je alles wat je nodig hebt om je dromen te bereiken. Ontdek ons aanbod en laat je Porsche schitteren zoals nooit tevoren.

1. Dynamic Content:

The SEO text is stored within the data sets for categories and brands. Automatically updates based on the specific results page being viewed.

2. Placement:

Appears consistently at the bottom of every results page, ensuring visibility without interfering with the primary user experience.

3. Content Structure:

Includes a well-written description tailored to the category or brand. Utilizes relevant keywords to improve page ranking on search engines.

Product compatibility message

The Product Compatibility Message is a notification bar that appears at the top of a product page when the car filter is active, but the selected car is not compatible with the product being viewed.

Let op! Dit product past NIET op uw auto!

Product main information section

The Product Main Information Section is the central area of the product page, presenting essential details about the product in a user-friendly format.

1. **Main product image**
A high-quality image showcasing the product clearly.
2. **Product images**
A gallery of supplementary images offering detailed views of the product.
3. **Product Title**
A descriptive and appealing title for the product.
4. **Small product description**
A concise description highlighting key features or benefits.
5. **Product pricing**
The product price, including dynamic updates if discounts or promotions are applied.
6. **Product amounts selection**
An input or dropdown to allow users to specify the quantity they wish to purchase.
7. **Order button**
A prominent "Order" or "Add to Cart" button with an intuitive design to encourage action.

Product detailed description

Waarom de Garrett GT28RS?

De Garrett GT28RS is een iconische turbocharger die aanzienlijke vermogenswinst biedt zonder de rijenaling te verstoren. Het is een veelzijdige keuze die geschikt is voor verschillende toepassingen, van dagelijks rijen tot circuitracen.

①

Voordelen van de Garrett GT28RS

Krachtige Vermogenstoename:

Verhoog het motorvermogen tot 350+ pk, afhankelijk van tuning.

Snelle Boostrespons:

Perfect voor snelle acceleratie en constante prestaties.

Betrouwbaarheid:

Gebouwd met de hoge kwaliteit en duurzaamheid waar Garrett om bekend staat.

Breed inzetbaar:

Geschikt voor verschillende voertuigen en toepassingen.

Duurzaam Ontwerp:

Vervaardigd uit hoogwaardige, hittebestendige materialen voor een lange levensduur.

Specificaties

②

Eigenschap	Detail
Maximaal vermogen	Tot 350 pk afhankelijk van tuning
Compressor inlet	47,2 mm
Compressor outlet	68,7 mm
Turbine inlet	59,8 mm
Turbine outlet	37 mm
Maximale boostdruk	1,3 bar
Compressor toerental	68 A/R
Turbine toerental	66 A/R
Geschikte motoren	1.8L - 2.5L motor

Compatibiliteit en Installatie

Geschikte automodelen:

De Garrett GT28RS is compatibel met een breed scala aan voertuigen met motoren tussen de 1.8L en 2.5L.

(Voor meer details, zie de installatie gids)

③

Model	Type	Jaar / Model	Motor type
Honda	3450X (D13/D14)	1989-1998	2.4i K24D6 inline-4
Mazda	M6-S inline	1989-2005 (NA)	1.6L DP-23 inline-4
Suzuki	1600	2002-2005 (NA)	2.0L 6-2005 Turbocharged inline-4
Suzuki	1600	2002-2005 (NA)	2.3L K20A7 Turbocharged inline-4 (D11-variant)

Installatie Informatie:

De GT28RS turbo wordt geïnstalleerd op het uitlaatpijpstuk van de motor. Dit proces vereist meestal een aangepast turbo-uitlaatpijpstuk en een bijpassende downpipe om de uitlaatpijp efficiënt af te voeren. Ook moet de intercooler worden geïnstalleerd om de luchttemperatuur te koelen, wat essentieel is voor het optimaliseren van de prestaties van de turbo.

④

Daarnaast moet de motorbesturing (ECU) worden aangepast om te zorgen dat de motor de juiste brandstof-luchtverhouding behoudt. Dit is cruciaal voor een veilige en efficiënte werking van de turbo. Voor de installatie worden vaak op maat gemaakte leidingen en fittingen gebruikt, en het is aanbevolen om de installatie door een professional te laten uitvoeren om te garanderen dat alles goed is afgestemd.

Installatie gids / Meer leren:

Voor uitgebreide informatie over de installatie en verdere technische details, kun je de volgende bronnen raadplegen:

- Installatiehandleiding voor Garrett GT28RS Turbocharger: <https://www.garrettmotion.com/>
- Meer leren over turbochargers en hun werking: <https://blog.kapperformance.eu/alles-over-de-turbo-charger>

Waarom installeren?

Het installeren van de Garrett GT28RS turbocharger geeft je auto een aanzienlijke vermogenswinst en zorgt voor een veel betere acceleratie. De turbo verhoogt de hoeveelheid lucht die de motor binnenkomt, wat resulteert in meer brandstofverbranding en dus meer kracht. Dit maakt het een uitstekende upgrade voor rijders die hun prestaties willen maximaliseren zonder concessies te doen aan betrouwbaarheid. Dankzij het compacte ontwerp van de GT28RS blijft de turbo responsief, waardoor hij ideaal is voor dagelijks gebruik en voor

1. Markdown description

A fun and informative product description written in Markdown format. It highlights key features and explains why the product is a great choice, engaging users with interesting content.

2. Specifications

A table displaying product specifications in two columns: one for the specification (e.g., Material, Manufacturer) and another for the detail (e.g., Metal, Honda).

3. Compatibility

A list of all compatible cars for the product. A short introductory text above the list provides important compatibility notes, such as "This product only fits European market Honda Civics, not US market Honda Civics."

4. Installation

Basic information about the product's installation process, including where it needs to be installed. It also includes links to external installation guides or internal resources hosted on the website.

User account page

The User Account Page is designed to provide users with a simple and detailed overview of their account details. The page will have a clean and functional layout, without any specific style constraints, focusing on ease of use and quick access to important account information.

1. Dashboard

A summary section that displays key account information at a glance, such as recent orders, account status, or notifications.

2. Account Details

A section where users can view and edit their personal information, such as name, email, and password.

3. Account Address

Displays the user's registered shipping and billing address, with options to update them.

4. Orders

A list of past orders, showing order numbers, status, and dates. Users can view the details of each order.

5. Payment Methods

A section showing saved payment methods with the option to add, remove, or update them.

6. Store Credit & Refunds

Displays any available store credit and information on recent refunds, including amounts and statuses.

7. Sign Out

A button to allow users to securely sign out of their account.

SEO and Information pages

The SEO and Information Pages are dedicated sections that provide important details about the website, improving user experience and SEO. Each section will be part of a larger block but also have a standalone page dedicated to that block. These blocks will include the following pages:

Contact and Contact information

1. Contact Information

This block will display essential contact details, including the company phone number, an email address for inquiries, and the physical location of the business.

2. Contact form

A simple contact form that allows users to submit questions or inquiries directly to the company.

About us

This section provides a brief overview of the company, offering users a glimpse into the company's mission, values, and background. The block will include a summary with a "Read More" button, directing users to a dedicated page for further details. The full page content still needs to be developed, as the current version does not fully capture the intended information.

FAQ (webshop questions)

The FAQ section will feature a compact block where users can click on each question to reveal the answer. Each question will be collapsible, allowing for a clean layout while still providing useful information. When users click on a question, they will also have the option to be redirected to the full FAQ page for more detailed information. On the full page, additional questions and answers will be displayed, offering a comprehensive resource for users seeking more in-depth information.

Login and Register pages

The Login and Register pages are designed to be simple and user-friendly, ensuring a smooth experience for users when creating an account or logging in.

Login page

The image shows a login page design. On the left is a background image of a dark car with a circular logo that says 'XC PERFORMANCE' and 'TUNING & RESTOMODS SINCE 2010'. Below the logo is the word 'Login' and the website 'XCPERFORMANCE.EU'. On the right is a login form with the following elements:

- 1. **Inloggen** (Title)
- 2. **E-MAIL OF ACCOUNTNAAM** (Email/Account name input field)
- 3. **WACHTWOORD** (Password input field)
- 4. **INLOGGEN** (Login button)
- 5. [nog geen account registreer hier](#) (Register account link)

The Login Page is straightforward, designed for ease of use, and includes the following elements:

1. **Form Title**
A simple title at the top to indicate the purpose of the form (e.g., "Login to Your Account").
2. **Email / Account name input**
This input allows users to enter either their account name or email address to log in.
3. **Password**
The field where users enter their password.
4. **Login button**
A button that becomes active only when both the email/account name and password fields are filled in.
5. **Register account link**
A link for users who don't have an account. It redirects them to the registration page.
6. **Wrong password notification**
If the user enters an incorrect password, a notification will appear informing them of the error, along with a link to reset their password via email.

Register account page

The Register Account Page follows a step-by-step process with three stages, designed to guide the user through creating an account.

Uw gegevens

• • •

VOORNAAM

The 3 dots represent the steps, with the darker dot showing the current step and the green dot indicating the final step, after which the account can be created.

REGISTREER ACCOUNT

This is the final step of the registration process, where the user creates their account credentials.

1. **Account Name**
The user selects a unique account name.
2. **Password**
The user enters a password for their account.
3. **Repeat Password**
The user re-enters the password to confirm it.
4. **Create Account Button**
Once all fields are filled in, the user can click this button to finalize their account creation.

Multilingual Content and SEO Structure

Language Support and Structure

The KCPerformance webshop will support Dutch as the primary language and English as a secondary option. Dutch will be the default for customer-facing content, including product descriptions and navigation, while English will cater to international users. Our role as developers is to implement the technical infrastructure for seamless multilingual support, ensuring optimal performance and user experience.

SEO Implementation for Multiple Languages

SEO will be essential for visibility in both languages. We'll implement metadata, titles, descriptions, and keywords in both Dutch and English, with proper translation and localization. To prevent duplicate content and improve SEO, hreflang tags will be used to indicate the correct language version for search engines.

Language Toggle and User Experience

A simple, intuitive language toggle will allow users to switch between Dutch and English. It will remember the user's choice throughout their session. If content isn't available in English, the default will be Dutch, ensuring full access to information without disrupting the user experience.

Design Considerations and Content Management

The layout will be optimized to handle both languages, accounting for text expansion during translation. Shopify's multi-language tools or third-party apps will ensure content is synchronized across languages, maintaining consistency and accuracy.

Testing and Quality Assurance

The purpose of this section is to establish a clear standard for testing and quality assurance to ensure the KCPerformance webshop operates seamlessly. A flawless user experience is essential, which requires rigorous testing of all components, functionalities, and integrations. The aim is to minimize errors, optimize performance, and ensure a consistent experience across all devices and browsers.

Key Area's of Testing

1. Functionality Testing

- **Product Pages:** Verify that all product information (price, description, images, stock level) is displayed correctly and dynamically updates as per user interactions.
- **Cart and Checkout Process:** Ensure that adding/removing items from the cart, applying discounts, and completing a purchase are all functioning smoothly.
- **User Account Management:** Test the creation of new user accounts, login/logout functionality, password recovery, and user profile updates.
- **Search and Filtering:** Validate that the search bar and product filters provide accurate results and that filters can be combined efficiently.
- **Navigation and Links:** Check all internal and external links to ensure they redirect to the correct pages.

2. Usability Testing

- **User Interface:** Assess how intuitive and user-friendly the interface is, ensuring that all elements are easy to understand and interact with.
- **Responsive Design:** Test the website on various devices (smartphones, tablets, laptops, desktops) and screen resolutions to ensure it remains visually appealing and functional.
- **Accessibility:** Make sure the webshop complies with basic accessibility standards, like proper alt tags for images, keyboard navigation, and sufficient colour contrast for readability.

3. Performance Testing

- **Load Speed:** Test the loading time of each page and ensure it meets performance benchmarks (e.g., under 3 seconds for main pages).
- **Stress Testing:** Simulate high traffic volumes to check how the webshop handles increased load and ensure stability.
- **Optimization:** Identify and fix any performance bottlenecks, like large images or inefficient code, to improve speed and reliability.

4. **Security Testing**

To ensure that the webshop functions properly across various platforms, it's essential to test the design and functionality on different browsers. This testing should include, but not be limited to, the following browsers:

- Google Chrome
- Mozilla Firefox
- Safari
- Microsoft Edge

By testing the website on these browsers, we can ensure consistent performance, smooth navigation, and that no features break or look out of place.

5. **Browser Compatibility Testing**

Security is a critical aspect of the webshop, especially when handling sensitive user data such as login credentials and payment information. Security testing should include the following steps:

- **SSL Certification:** Verify that SSL encryption is correctly implemented, ensuring that data transmitted between the user and the server is secure.
- **Password Storage:** Ensure that user passwords are securely hashed and not stored in plaintext.
- **Input Validation:** Test the forms to prevent SQL injection, XSS attacks, and other malicious input.
- **Session Management:** Check that user sessions are properly managed, with automatic logouts after a certain period of inactivity and secure cookie management.

6. **Integration Testing**

The login functionality is one of the most critical features of the webshop. It should be tested thoroughly to ensure that:

- **Correct Credentials:** Users with valid credentials should be able to log in without issues.
- **Incorrect Credentials:** The system should handle incorrect username/email or password attempts by displaying an appropriate error message.
- **Password Recovery:** Ensure that the "Forgot Password" link works correctly, sending a password reset link to the user's email.
- **Session Persistence:** Once logged in, the user should remain logged in across pages and should be able to log out when desired.

Quality Assurance Checklist

To maintain the highest quality, follow this QA checklist before finalizing the webshop:

- All pages load correctly and are free of console errors.
- Product information is accurate and dynamically updates without delays.
- Navigation is smooth, and all links are functioning.
- The checkout process is fully operational from start to finish.
- User account functionalities (signup, login, password reset) are working.
- The webshop is responsive and looks good on all tested devices and browsers.
- Performance meets or exceeds the defined speed benchmarks.
- All user data is securely stored and protected from common threats.
- Integrations with third-party services are reliable and error-free.

Documentation and Reporting

- **Bug Reports:** Use a centralized system (e.g., Jira, Trello, or a shared Google Sheet) to document any issues found, including steps to reproduce, severity, and proposed fixes.
- **Testing Logs:** Keep a detailed log of all tests conducted, including dates, methods used, and outcomes, for reference and accountability.

Deployment

For the deployment of the KCPerformance webshop on Shopify, please follow these guidelines to ensure a smooth launch.

Deployment Instructions

- **Domain Setup:** The webshop should be deployment to the domain **shop.kcperformance.eu**. Contact me for any details or configurations needed to connect the site to this domain.
- **Testing Environment:** Before the final deployment, I would like the webshop to be set up in a **live testing environment** where the team can review the site. This will allow us to thoroughly check all functionalities and verify everything aligns with our requirements.
- **Approval Before Launch:** Once the testing environment is ready, notify me to arrange a walkthrough and gather feedback. The site will only go live after it meets all design and functionality expectations.
- **Final Deployment:** After our team approves the site in the testing environment, please coordinate with me for any additional deployment requirements. We'll work together to make sure everything is set up for a successful launch.
